

SIFT

Freelance Bid Intelligence

Stop bidding blind. Start winning.

An automated intelligence platform that discovers, analyzes, and scores freelance opportunities — before you spend time writing a proposal.

Vibe Coding Hackathon 2026

Organized by DYLP

Automation Track

Intelligent pipeline replacing manual effort

Freelancing Has an Opportunity Selection Problem

Freelancers spend significant time searching for jobs and writing proposals — without knowing whether an opportunity is worth pursuing. The challenge isn't finding more jobs. It's identifying which ones deserve your time.

Scattered Opportunities

Relevant jobs exist across multiple freelance platforms simultaneously — no single place to find them all.

Manual Research

Freelancers must inspect listings, competition levels, budgets, and client profiles individually, one by one.

Hidden Signals

Critical data — client spending history, hire rate, dispute records, and review patterns — is difficult to evaluate quickly.

Wasted Effort

Proposals are written before understanding actual fit or opportunity quality, burning time on weak or risky bids.

The problem is not finding more jobs. The problem is identifying which jobs deserve your time.

Meet SIFT

SIFT is an automated Freelance Bid Intelligence system. It discovers live opportunities across five major platforms, gathers job and client signals, evaluates each opportunity against the freelancer's individual profile, and generates a personalized Sift Score from 0 to 100.

Discover

Find live opportunities across freelance platforms in real time.

Personalize

Compare with the freelancer's skills, proficiency, niche, target rate, and portfolio context.

Decide

Receive a clear GO, RISKY, or SKIP verdict with reasons and red flags.

Analyze

Collect job, competition, budget, and client signals automatically.

Score

Generate a personalized 0-100 Sift Score for every opportunity.

Act

Get a personalized proposal angle and explore through contextual AI chat.

From Manual Job Hunting to One Automated Pipeline

SIFT belongs in the Automation track because it replaces a fragmented, time-consuming manual process with a single intelligent pipeline.

✗ Without SIFT

1. Search multiple platforms manually
2. Open individual listings one by one
3. Read job requirements and check budget
4. Research the client independently
5. Evaluate competition level
6. Compare job with personal skills
7. Decide whether to bid
8. Think of a proposal angle from scratch

✓ With SIFT

1. Create your freelancer profile once
2. Start one automated scan
3. SIFT discovers live opportunities across platforms
4. Extracts relevant job and client data automatically
5. Matches opportunities against your profile
6. AI analyzes each opportunity
7. Opportunities are scored and ranked
8. Receive GO, RISKY, or SKIP with reasons and red flags
9. Get a personalized proposal angle — ready to use

📌 **SIFT automates the research and analysis before the proposal** — allowing freelancers to focus their effort on opportunities worth considering.

The Same Job Is Not the Same Opportunity for Everyone

SIFT does not generate a generic job quality score. Every opportunity is evaluated against the individual freelancer's unique profile.

Personalization Signals

Skill Match

How closely the freelancer's skills align with the job requirements.

Skill Proficiency

Skills evaluated at Beginner, Competent, or Expert levels — not just presence.

Niche Alignment

Opportunity compared against the freelancer's specific specialization.

Rate Compatibility

Job budget evaluated against the freelancer's target rate.

Portfolio Context

GitHub and portfolio data provide evidence of actual work.

Client Intelligence

Available client history and behavior evaluated alongside the job.

The Sift Score

GO

e.g. **87/100** — Strong skill alignment, suitable budget, healthy client history, manageable competition.

RISKY

Potential opportunity with important concerns — low hire rate, budget mismatch, or skill gaps flagged.

SKIP

Weak fit or unfavorable signals — poor client history, budget too low, or niche mismatch.

The score is supported by specific reasons and red flags — not presented as an unexplained number.

SIFT scores opportunities for you, not for the average freelancer.

More Than an Opportunity Score

SIFT delivers a complete, connected workflow — from discovery to decision to action — inside a single platform.

Live Multi-Platform Discovery

Searches **Upwork · Freelancer · Guru · PeoplePerHour · Toptal** for live opportunities in real time.

Client Intelligence

Evaluates available signals — client spending, hiring behavior, hire rate, reviews, and dispute history — to surface risk and quality indicators.

Personalized Proposal Angle

Generates a relevant proposal opening based on the job, the client, the freelancer's skills, niche, and portfolio context.

Context-Aware AI Chat

Ask questions about any opportunity: "Why is this risky?" · "What should I emphasize?" · "Which requirement is my weakest match?"

Scan History

Completed scans and opportunity results are stored — revisit previous research and decisions at any time.

Single Job Analysis

Analyze a specific freelance listing individually without running a full scan — useful for targeted deep dives.

 **All capabilities exist inside one connected, automated workflow.**

The System Behind SIFT

A modern, production-ready architecture built for speed, intelligence, and scalability.

Frontend

Next.js 16 · React 19 · TypeScript — deployed on **Vercel**

Backend

FastAPI · Python 3.11 · REST APIs · Background Processing — deployed on **Railway**

Opportunity Discovery

Serper.dev — live Google SERP search for fresh freelance listings across platforms

Data Extraction

Direct HTTP scraping — job listing data and client profile information

Portfolio Context

GitHub API — direct portfolio and project extraction

AI Intelligence

Groq · Llama 3.3 70B Versatile — powers opportunity scoring, GO/RISKY/SKIP verdicts, reasons, red flags, proposal angles, streaming AI chat, and project suggestions

Data & Auth

Supabase · PostgreSQL · Row Level Security — authentication, scan history, and opportunity storage

Not Another Freelance Job Board

SIFT is a decision-intelligence layer — not a listing aggregator. Here's how it compares to traditional freelance search.

Capability	Traditional Freelance Search	SIFT
Opportunity Discovery	Shows job listings on one platform	Searches across 5 freelance platforms
Research Process	Requires manual research per listing	Automates discovery and research in one pipeline
Information Access	Scattered across multiple platforms	Brings relevant signals into one workflow
Personalization	Same listing for every freelancer	Uses individual skill proficiency and niche context
Client Analysis	Limited or no client analysis	Evaluates available client intelligence signals
Opportunity Ranking	No personalized ranking	Generates personalized 0-100 Sift Score
Decision Support	Freelancer decides with fragmented info	GO, RISKY, or SKIP verdicts with reasons and red flags
Proposal Support	None	Generates a personalized proposal angle
Deep Analysis	None	Contextual AI chat per opportunity

SIFT does not create more freelance listings. It helps freelancers make better decisions about the opportunities already available.

Stop Bidding Blind. Start Winning Smarter.

SIFT turns scattered freelance opportunities and fragmented client signals into personalized, actionable intelligence.

One profile. One automated scan. Better-informed bidding decisions.

Key Design Principles

SIFT was built around three non-negotiable design decisions that define its character as an intelligence platform.

Personalization First

Every score, verdict, and proposal angle is generated relative to the individual freelancer's profile – skills, proficiency levels, niche, target rate, and portfolio evidence. Generic scores serve no one.

Transparent Reasoning

Every GO, RISKY, and SKIP verdict is accompanied by specific reasons and red flags. SIFT explains its conclusions – it does not deliver unexplained scores or black-box outputs.

Decision Support, Not Decision Making

SIFT surfaces intelligence and reduces friction in the evaluation process. The freelancer retains full agency over which opportunities to pursue – SIFT improves the information available, not the outcome guaranteed.
